

A Plan for The Japan-Korea Tunnel

NON-PROFIT FOUNDATION (NPO)
THE JAPAN-KOREA TUNNEL RESEARCH INSTITUTE

Chairman Nozawa Daizo

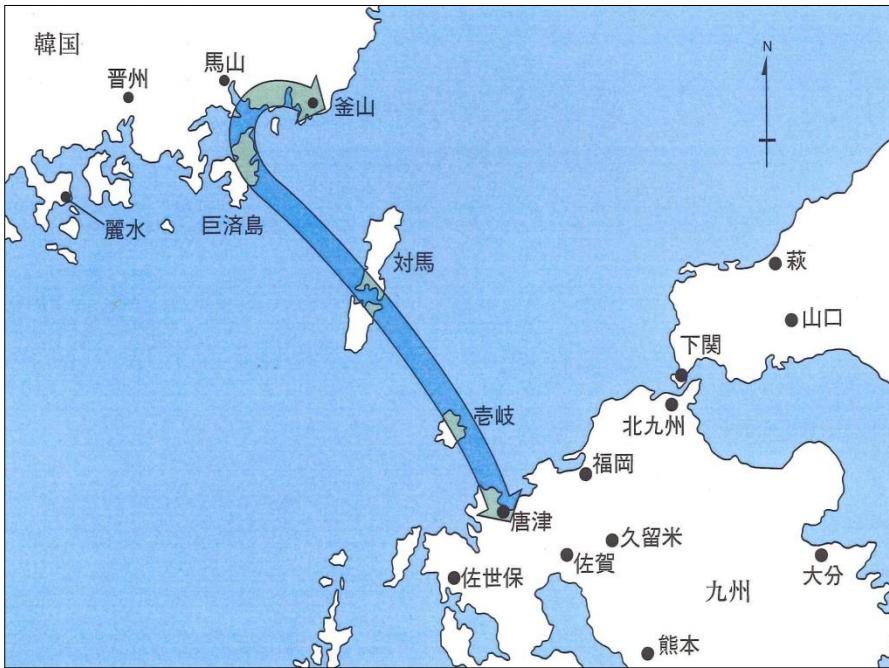

Chairman Nozawa Daizo

Direct route between Tokyo, Seoul and Beijing

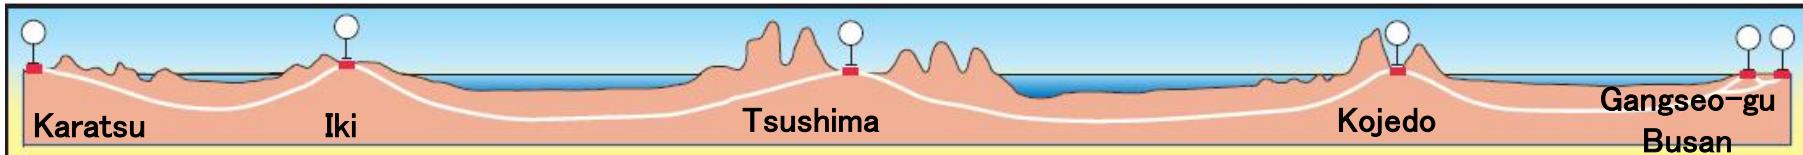

Specifications of the Japan-Korea Tunnel

Plane view of the route

Total length	270km (Karatsu↔Busan)
Length of the undersea area	150km (Karatsu↔Busan)
Minimum curve radius	6,000m
Maximum gradient	12~15‰
Construction Period	About 10 years after start of works
Construction Cost	About 90 billion USD

Cross-sectional view of the route

The Japan-Korea Tunnel

Distance between the main stations between Tokyo, Seoul and Beijing (km)

Tokyo	↔ Seoul	06:11
Seoul	↔ Pyongyang	00:52
Pyongyang	↔ Beijing	04:32
Beijing	↔ Seoul	05:25
Seoul	↔ Osaka	04:28
Busan	↔ Shenyang	03:57
Beijing	↔ Tokyo	11:36

Arrival time (hours: minutes)
(Case of scheduled speed 300km/h)

Method of utilization

Passenger	High-speed passenger train (Shinkansen、KTX)
Cargo	Cargo Container Home Delivery Services
Vehicle	Shuttle Train (Highway Train)

Shinkansen

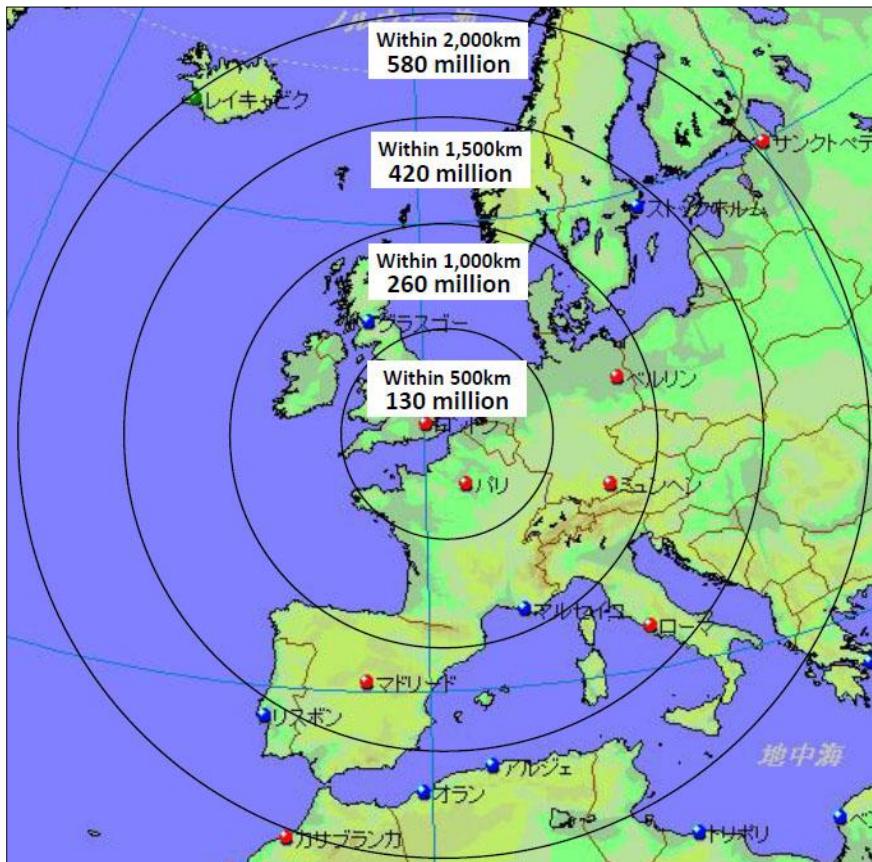

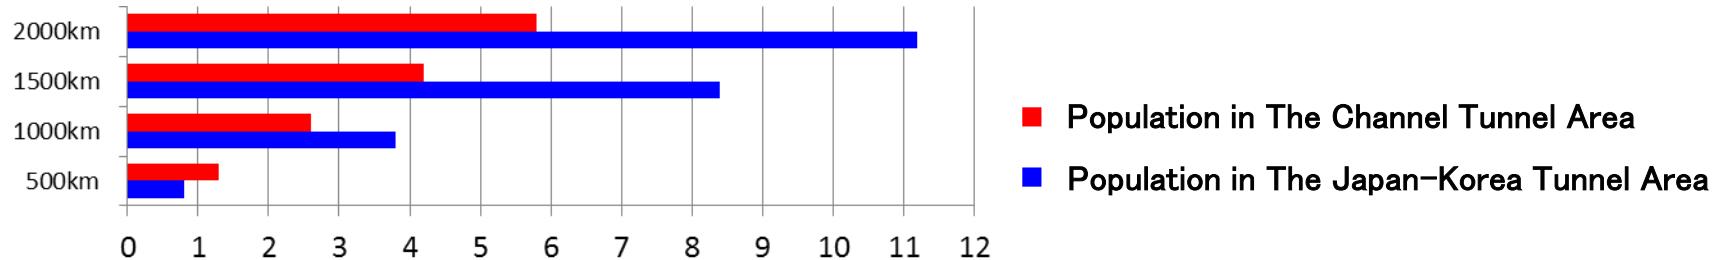

Shuttle Train (Channel Tunnel)

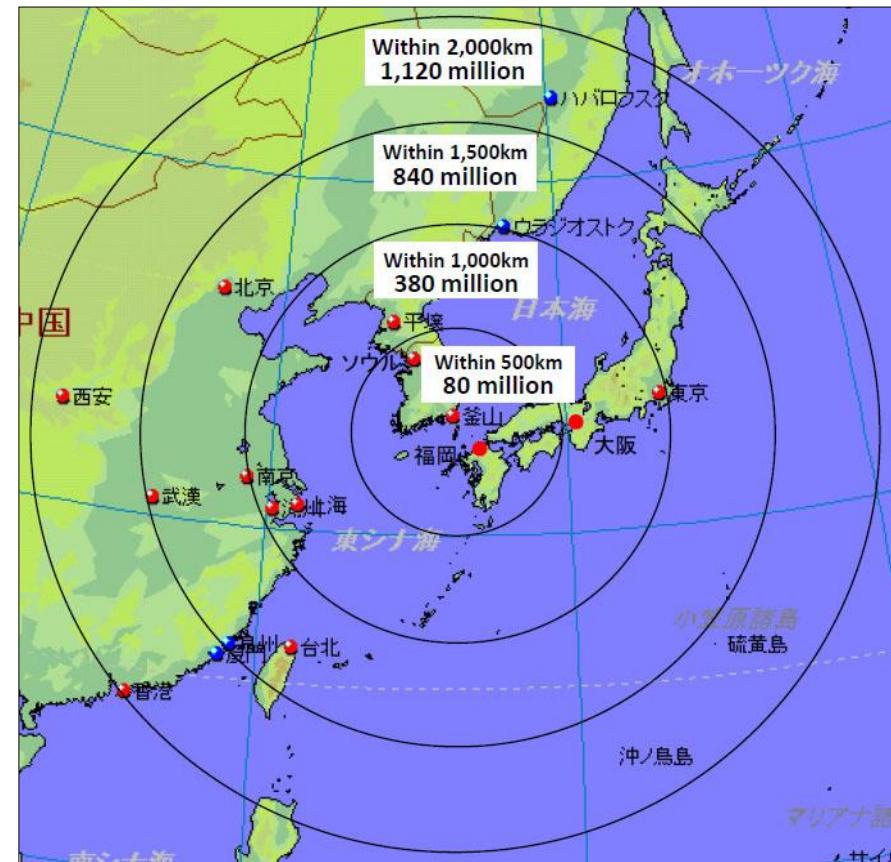

Construction of Infrastructure and Ownership	Public sector	Lower aspects
Business management	Private sector	Upper aspects

Cargo Container

Population in The Channel Tunnel Area

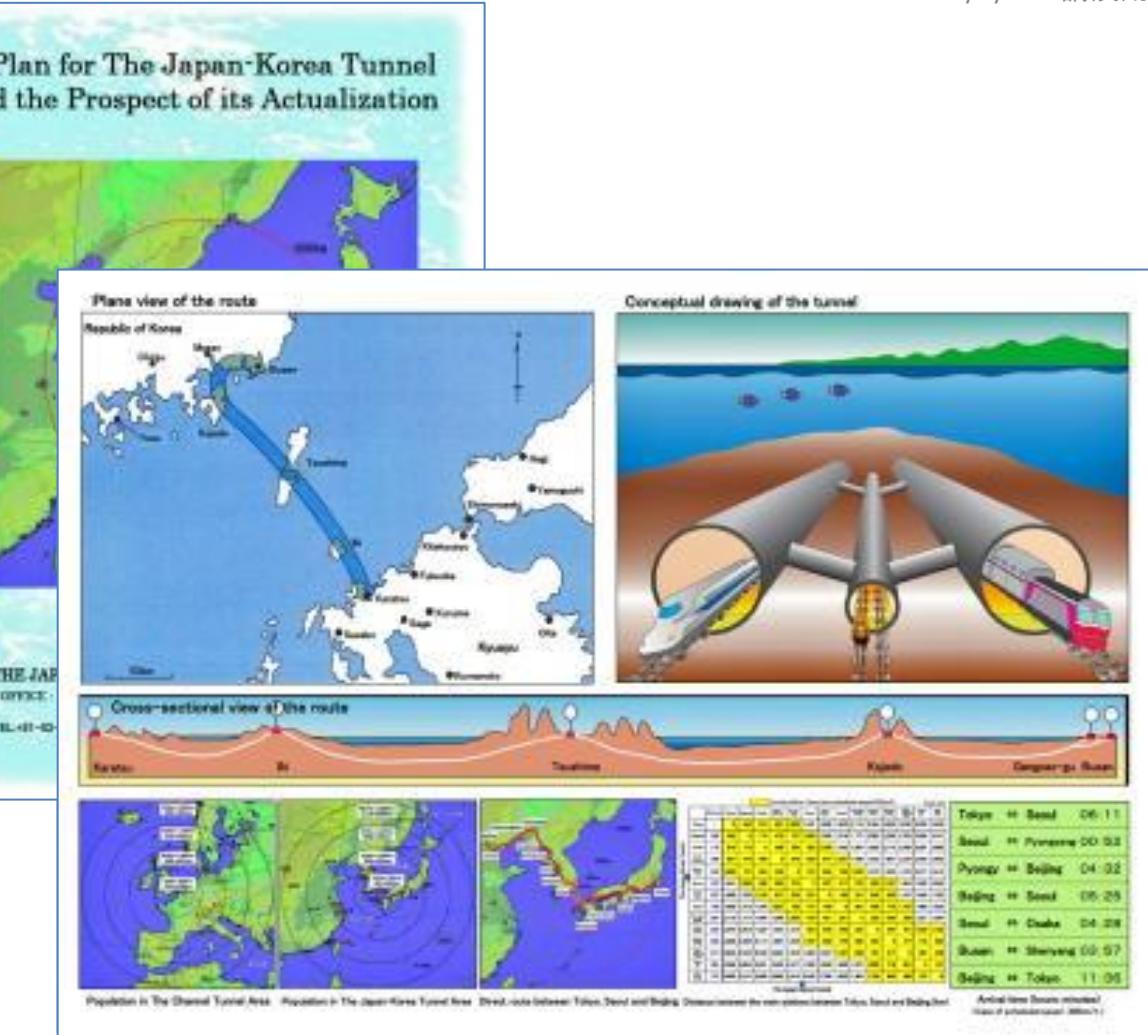

Population in The Japan–Korea Tunnel Area

I. Specifications of		
Total length	270km (Kanazawa→Busan)	
Length of the undersea area	150km (Kanazawa→Gwangan)	
Minimum curve radius	8,000m	
Maximum	12~15%	
Construction	About 10 years	
Construction	About 90 billion USD (2019-2029)	

II. Method of utilization		
Passenger	High-speed passenger train (Shinkansen, KTX)	
Cargo	Cargo Container Home Delivery Services	
Vehicle	Shuttle Train (Highway Train)	

III. Method of operation		
Division of upper aspects and lower aspects		
Construction of infrastructure	Public sector	Lower aspects
Business management	Private sector	Upper aspects
